

KISHORE M

kishoremurugesan14@gmail.com | Portfolio | LinkedIn | GitHub | Chennai, Tamil Nadu

Career Summary

Full Stack Developer with hands-on experience across the entire web stack — building responsive, component-driven UIs in React.js and designing REST APIs, relational schemas, and authentication systems with Node.js, Express.js, and MySQL. Experienced building real-time systems with Socket.io and securing endpoints with JWT-based auth and middleware. Strong foundation in Java. 70+ DSA problems solved on LeetCode.

Technical Skills

Frontend: React.js (Hooks, Context API), HTML5, CSS3 (Flexbox, Responsive Design), Axios (API Integration)

Backend: Node.js, Express.js (REST APIs, Middleware, Route Protection), Spring Boot (REST APIs)

Database: MySQL (Schema Design, Joins, Transactions, CRUD Operations)

Languages: Java (OOP, Functional Interfaces, Exception Handling), JavaScript (ES6+)

Tools: Git, GitHub, Postman, VS Code, Cursor

Projects

Real-Time Chat / Collaboration Application [GitHub Link]

React.js, Express.js, Socket.io, JWT, MySQL, REST APIs, HTML5, CSS3, Postman

- Built a full-stack real-time collaboration app: a React frontend using functional components and hooks rendering live message updates via Socket.io event listeners, backed by an Express.js server handling event-driven messaging and connection lifecycle.
- Designed a room-based chat system supporting multiple concurrent chat rooms, with client-side state synced to server-side Socket.io namespaces for isolated message broadcasting and presence tracking.
- Implemented JWT-based authentication end-to-end — token issuance and verification on protected Express routes via middleware, plus frontend token storage, protected routes, and automatic redirection on expiry.
- Designed a normalized MySQL schema (users, rooms, room memberships, messages) with foreign-key relationships, enabling reliable message-history retrieval and room membership tracking.
- Built and tested REST APIs for room creation, joining, and message history in Postman, then integrated them into the React frontend using Axios.

Banking Management System [GitHub Link]

React.js, JavaScript (ES6+), Express.js, Node.js, REST APIs, MySQL, HTML5, CSS3, Postman

- Built RESTful APIs with Express.js and Node.js for customer, account, and transaction management, structured around resource-based routing, and consumed them in a responsive React dashboard.
- Designed the MySQL data model for customer accounts and transaction records, applying joins for account-to-transaction lookups and CRUD operations for account management.
- Connected the frontend to the backend via Axios using async/await, with loading and error states handled in the UI and client-side validation on transaction inputs to reduce invalid API calls.
- Applied ES6+ features (async/await, Promises, modules) to structure asynchronous API logic cleanly across controllers and services.

Education

B.E. in Electronics and Communication Engineering Nov 2020 – Jun 2024

Saveetha Engineering College, Chennai

Higher Secondary Certificate (HSC) – Computer Science Jun 2018 – Mar 2020

J. Jeya Matriculation Higher Secondary School, Nagapattinam

Achievements & Certifications

- Java DSA Training** – Vision Tranz IT Solutions (Dec 2024 – Jul 2025): Hands-on training in Data Structures, Algorithms, and Java development.
- LeetCode Problem Solving:** Solved 70+ DSA problems focused on Arrays, Strings, Hash Maps, and Problem Solving.
